ABOUT FINANCIAL MODELING

Financial Modeling is one of the most fundamental and widely sought after skills in the finance industry. It is the art of building a model to depict financial statements and investment analysis using MS Excel. This helps arrive at optimal business solutions by analyzing various parameters. At the end of the course, You will be able to do the task of building a model depicting financial statements/business model, which helps in decision making.

The Ideal Candidate for Financial Modeling: This program is suitable for students and professionals related to Investment, Equity Research, Credit, Project, Mergers & Acquisition, Corporate Finance, Critical Thinking and analytical skills. It is also ideal for CA, CFA Program candidates, FRM, MBA Finance, B TECH and Commerce Graduates who want a career in any of the above profiles.

Financial Modeling is also a suitable choice for those in non-finance related careers such as in the preparation of Business Plan, working on Excel, decision making and mapping theory to practical.

- Calculating Enterprise value and Implied Market capitalization

Course Structure, Training Highlights and Fees

Topics and Structure

Day 11

- Introduction to Macros and Advanced Application Building in Excel
- Key Concepts in Macros
- Macros as recorded Robots!
- Form Controls and Active X controls
- Implementing user forms in Excel Macros
- Linking forms to excel cells
- Building flexible Charts in Excel

Day 12

- Understanding VBA - Sub & Functions
- Understanding the Relevant Language Constructs
- IDC Implementation using Macros
- Breaking Circular Loops using Macro
- Monte Carlo Simulation
- Basics of Debugging VBA Code

Day 13

- Building Primary & Secondary Axis in a Chart
- Radar Charts - Showing the progress of Commercial Property Development
- Waterfall Charts - Showing Funding Breakup for Renewable Energy project
- Football Field - Showing Valuation Summary using Different Parameters
- Gantt Chart - Tracking the status of an Ongoing Project

Day 14

- Named Ranges
- Index Match
- Array Functions
- Building Scenarios using Offset Functions
- Creating growing models & Index functions
- Usage of Indirect Functions
- Usage of Goal Seek and Solver Functions

Commercial Banks use Financial Modeling for disbursing loans for the projects; Project Management uses it for performance tracking of on-going projects. Financial Modeling concepts can be applied to any industry. Individuals who hold an MBA and also possess knowledge of Financial Modeling have an advantageous edge over others.

Course Highlights

Testimonials

Arup Chakraborti: *Manager with Bank Of Baroda, Mumbai.* "I found the Financial Modeling course offered by EduPristine as knowledge enriching. Course content and lectures were good and helped in understanding complex financial models and improved efficiency at work".

Ujjwal Khairnar: *PMO Lead at Capita ITS.* "EduPristine's faculty is awesome. The classroom sessions from industry practioners gave a deep understanding of the topics. As a PMO Lead, I expected more on project finance with advanced excel tricks but I got a lot great stuff to learn apart from it. I thanks Pristine faculty for this. Looking forward for continual relation with Pristine".
